DETAILED ACTION

Claims 1-20 are present within this instant examination in response to applicant's response to the 02/01/2007 examination. Acknowledgement is made that the applicant within the applicant's response has canceled claim 19 and as such claim 19 may not be given further consideration within this instant examination.

Priority

No priority is claimed for this application and as such the filing data is being used within this instant examination, 10/20/2003.

Drawings

Acknowledgment is made that the drawings are accepted as they appear within the application at this time since no informalities or error appear to be present that would require an objection or rejection.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claims 1-18 and 20 are allowable.

The present invention pertains to test pattern generation for generating a multitude of test patterns corresponding to a multitude of signal lines. The claimed invention recites features such as: "... storing a first value of a first pattern in a register; storing a second value of a second pattern in the register; receiving a clock signal; selecting either said first value or said second value for inclusion in a test pattern for conveyance via a link in response to said clock signal; wherein determining whether to select either said first value or said second value on a given clock cycle is determined

Art Unit: 2117

according to a predetermined test pattern sequence; and wherein said register comprises N bits, said first pattern comprises N/2 bits, said second pattern comprises N/2 bits, and said link comprises N/2 signal lines, and wherein each signal line corresponds to one bit of each of said first pattern and said second pattern."

None of the prior arts of record, either taken by itself or in any combination with any other prior art would have anticipated or made obvious the following limitation combined within the above limitation at or before the time the invention was filed: "... said first pattern comprises N/2 bits, said second pattern comprises N/2 bits, and said link comprises N/2 signal lines, and wherein each signal line corresponds to one bit of each of said first pattern and said second pattern."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
